Comprehensive seminar in "**Neuro Linguistic Programming (NLP) (Level 1)**, Canadian Training centre of human development, Bahrain.

April - June, 2001

On – line economic modelling course, Free University of Brussels, Belgium. The instructor was professor, A. Bayar. The course aimed to introduce all the basic tools for constructing and implementing large- scale applied general equilibrium models for policy analysis.

May, 98 – June, 01

PhD in Economics. DPPC, University of Bradford.

Topic of the thesis: **The impact of macroeconomic policies on income distribution: an empirical study of Egypt**. The thesis aimed to study the impact of macroeconomic policies on income distribution between rural and urban areas in Egypt. A Social Accounting Matrix (SAM) technique is employed as the main theoretical model on which the empirical investigation is based. The empirical validation of the model consists of constructing SAM for 1995/96. Initially, an aggregated SAM is used to study broad questions. Then after updating an input – output table for Egypt for 1991 / 92, the SAM is disaggregated in order to be able to delve into more specific questions. Since

policy simulations are applied to identify the potency of policy packages. The results are informative about the impact of policy packages on income distribution within and between rural and urban areas in Egypt.
